The STEMTECH FIRST ANNUAL CONVENTION

US\$159 PER TICKET

(includes all functions and meals)

two easy ways to make sure you're part of the action

March 16-18, 2007
at the Costa Mesa Hilton

- Call Distributor Services at (949) 542-8600
- Log in to www.stemtechhealth.com & click on the Convention link.

DO IT TODAY!

IS IT TIME TO RENEW YOUR DISTRIBUTORSHIP?

Each year on the anniversary date of your enrollment as a STEMTech distributor, you must RENEW your distributorship. The fee for Annual Renewal is US\$25. If you have not arranged for an automatic renewal of your distributorship, it is your responsibility to remit your renewal fee to STEMTech on or before your anniversary date. You may renew your distributorship in your Back Office by going to stemtechhealth.com. You may also renew by mail or fax OR contact Distributor Services to renew by phone using a credit card.

Looking Forward

As we complete our first full calendar year in business, it is a time of reflection. Looking back, we see all that has been accomplished in such a short period of time. We are thankful for the efforts of our loyal and dedicated field leadership team who have overcome obstacles, focused on the task at hand and kept a positive attitude since pre-Launch. These efforts have brought STEMTech to where we are today.

During our first year, we have touched the lives of thousands by helping to improve their health and prosperity with our groundbreaking new product, StemEnhance™. The coming year promises to be even more exciting, as we take the company to the next level of performance and achievement.

At the First Annual Convention, March 16-18, we will be unveiling many of the exciting things we have in store for STEMTech in 2007. These announcements, along with the outstanding training, tours and fun socializing in sunny southern California, will make our very first convention one that you do not want to miss. We look forward to seeing you there!

To your health and prosperity!

RAY C. CARTER, JR.
President & CEO

CHRISTIAN DRAPEAU

Research & Development Outlook

What's happening in R & D? We have begun receiving results from the trials with StemEnhance for dogs and horses; and so far these tests show real success. It is rewarding to hear dog owners describing how their aging best friends are rapidly gaining vitality and a new level of activity after taking StemEnhance. Horse owners are talking of great improvement in their mounts' quality of life.

Speaking of quality of life... The STEMTech Quality of Life Assessment (SQOLA), launched in November, is progressing well, but we need more participants to generate sufficient scientific data to be useful. The SQOLA is a unique opportunity for new distributors on AutoShip to monitor their health improvements using a scientifically validated Quality of Life questionnaire. Visit the STEMTech website to get more information on this program.

I will be sharing many more of the exciting developments from our laboratories and outside tests when we gather in Costa Mesa in March. I look forward to meeting you there in person.

Blessings,

CHRISTIAN DRAPEAU
Chief Science Officer

TERBORG MEDIA GROUP

TERBORG MEDIA GROUP

TRIPLE DIAMONDS

Kathleen Hansen

Minnesota

For years, Kathleen's poor health had been limiting her ability to enjoy life. Nevertheless, it took calls from Ralph Weber, Bill Lohmeyer and Steve "Murph" Murphy to convince her that StemEnhance™ was worth a try. After only eight days on the product, however, she had such a dramatic health turnaround that "I came in as a FastStart," Kathleen says.

It had been years since Kathleen had been able to enjoy a full night's sleep. That meant she drank 10-12 cups of coffee daily for energy... to make up for her sleep deprivation. She also suffered unrelenting back discomfort that made it impossible to do much of anything. She eventually resorted to purchasing a hospital bed for herself. "I had tried everything else - every accepted and alternative remedy - with no relief. Then StemEnhance came into my life."

That first eight-day period with StemEnhance was just the beginning of a new life for Kathleen. After a couple of months, her back discomfort was gone. She sleeps through the night now, no problem. And that coffee? "I'm down to maybe a cup a day," she says. "It's wonderful! I am healthier now than I have ever been."

People have been amazed at the change in Kathleen and her young daughters, who also got great benefits with StemEnhance. Friends and acquaintances have leapt at the opportunity to turn their own health around. "I had people lined up, wanting to buy StemEnhance from me. I made Director right away. People got the vision and they shared StemEnhance. With the help of Ralph, Bill, Steve and others, before I knew it, I had created eight Directors, 24 Business Builders, and the volume just exploded!"

Kathleen looks to a bright future of health and helping others. She'd like to fund the building of a homeless shelter in her area and help her husband cut down his long, hard hours on their dairy farm. As Kathleen's organization grows and her health blossoms, there's little doubt that she'll reach these goals.

Bruce Higgins

Lifestyle Dynamics

Oklahoma

When it comes to a business building credo, previous HealthSpan Rising Star Bruce Higgins says, "Keep it simple." His approach to people is uncomplicated: He asks, "If I could show you a way to feel better, would you like to hear about it?" Bruce has found that this general question encourages people to be open and willing to listen to his personal story about the benefits he's enjoyed from StemEnhance and STEMTech. And many of them are ready to sign up.

These days most of Bruce's prospecting is through his team's weekly conference calls. "We usually have about fifty people on the call that lasts 20-25 minutes." Bruce stresses that it's important to start on time, keep testimonial speakers limited to two-three minutes, and maintain a professional tone throughout. "At the end of the call, we ask people to contact the distributor who invited them to participate, and many sign up right away." With this weekly recruiting tool in place, Bruce's team is experiencing consistent growth.

With a lot of experience in network marketing under his belt, Bruce is himself a valuable resource for his team. "I teach them to fish," he says, "but I don't fish for them." He adds that "all the information anyone would ever need is there for them: the website, the CD's and DVD's, company publications and others." But Bruce warns new distributors not to try to overwhelm a prospect with too much information. "People will respond better to a few simple questions that let you know what their needs are. And always give them time for their response." He stresses again that this is a simple business, and the key is to keep it easy to duplicate.

While STEMTech prospects come in all ages and from every walk of life, Bruce points out that one group provides millions of prospects: "We have a huge market of Baby Boomers who are looking for preventative measures for their health," he says. "These folks don't want to be dealing with crisis issues in their seventies." Everybody knows people in the 55-65 year age group. Targeting just this market can provide "years of great prospects!"

TRIPLE DIAMONDS

Bill Lohmeyer

Minnesota

Another former HealthSpan Rising Star, Bill Lohmeyer is a man who "can't sit still." Although he is blind and has suffered for all of his adult life with other serious physical challenges, Bill is not one to let life limit him. He has discovered that the STEMTech business is so simple that his physical limitations were no barrier to his rising to Triple Diamond in only ten months!

"The key to the kingdom is AutoShip," Bill says. He uses a flat-rate phone system to contact people everyday, offering them the opportunity to learn about stem cells and the STEMTech business. With the help of his wife Caroline, he sends off a package containing "The STEMTech Story" DVD and a newsletter with testimonials to his phone prospects. He calls each prospect a couple of days after they receive the package, and "Caroline and I have been signing up two-six people a day."

After he was in the business for about three months, Bill told Caroline, "I think we could be making about \$4000 a month by a year from now." When his recent monthly commission check surpassed five figures, Bill says, "Now we can't even imagine where it'll be by next May!"

While their financial goals may be a little undefined, Bill has a personal goal that he's working on with the help of StemEnhance. "I'd like to get back to flying," he says, noting that he accumulated over 3800 flying hours before his near total blindness grounded him. For the last six years, he has located his TV two feet from his bed; that way he could see some images and movement on the screen. Recently, he discovered that he was able to see images and movement from four feet away. "That might not seem like much to many people, but it tells me that something may be going on." He plans to continue taking extra StemEnhance each day to support the fight against all of his physical challenges, looking forward to a time when he might just climb back into the cockpit again. Now, that's a goal worth working for!

Felix Pastoriza

Puerto Rico

The first Triple Diamond Director from Puerto Rico, Felix Pastoriza embodies his team's philosophy in Embajadores de la Salud, their project dedicated to bringing health and wealth to many people. An experienced network marketer for 20 years but a STEMTech distributor only since April, Felix says he did not really begin working on the business until July, after seeing for himself just what StemEnhance™ can do to sustain and renew the human body. By then his sponsor, Dr. Enrique Martinez, had shared his vision of the business opportunity that could generate both health and wealth for so many people, and Felix got busy building a business.

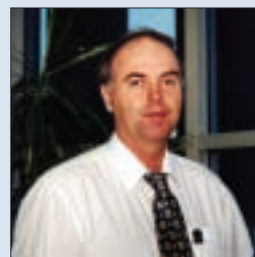

Each month Felix worked to grow his organization, achieving Director in July, Senior Director in August, then Double Diamond in September and Triple Diamond in October. He used "a systematic and step-by-step approach" to build a strong team that works together for the benefit of all. While he has found the Spanish language DVD "La Historia De STEMTech" to be very helpful with prospects, Felix says that "the product itself is the best tool for approaches to the Hispanic market." He adds, "Explaining the benefit of the product, along with sharing my own experience, is by far the most effective method." Felix's personal story mirrors the testimonies of many others whose quality of life has been improved with StemEnhance. He noticed almost immediately that his mental wellbeing took a sharp upturn with StemEnhance. He says, "My mental focus is more present and I certainly have more energy... I don't feel tired, even after putting in 16 hours of work." Within two weeks, the discomfort in his right shoulder, which had limited his activities, diminished by 95%. As he shared his experience with others, they too experienced the improved quality of life that StemEnhance brings. "It's a wonderfully rewarding feeling," he says, "when people come up to me to show their appreciation for bringing the message of health to them. This is amazing for me!"

DOUBLE DIAMONDS

EVERETT POTTER

North Dakota

Everett first learned about StemEnhance™ from a woman he'd known in an earlier network marketing association. She told him about a "new stem cell enhancer," but she didn't really know much about it. Everett was instantly excited, regardless: "I said, 'Do you know what you've got?'"

It's fantastic! And I was in right away." He went FastStart and looked forward to receiving his first shipment of StemEnhance.

Having lived with reduced quality of life for most of his 50+ years, Everett says, "I am always looking for holistic ways to deal with my body's challenges." Once he began taking StemEnhance, his quality of life started to increase noticeably. What a change! These days he's up before sunrise after a full night's sleep, and has energy through days that are free of the challenges he'd dealt with for so long. He says, "I never felt this good in my life."

Everett has found that doing home meetings is a very effective way to share the word about STEMTech and StemEnhance. And these meetings are different, he says. "The groups are split, 50-50, between men and women. The husbands are just as eager to come and learn about the business as the ladies are." He says this is unusual for most network marketing companies.

Everett says he appreciates all the company-provided tools, "especially the Back Office." He is impressed that the STEMTech staff works so hard to support distributors in the field. STEMTech is just different, he points out. "I love this company!"

SHARON SOYKA

Minnesota

A Rising Star in our last issue of HealthSpan, Sharon Soyka has been working hard every day to build her organization, train her team, and reach higher levels of achievement. She has been a longtime believer in the power of AFA and knew of Christian Drapeau's work for years, so she knew from the outset that STEMTech was the right company for her to join. "I feel I am fulfilling my life's purpose," she says.

These days it's really hard to catch up with Sharon. She is always out and about or on the phone, sharing StemEnhance with individuals and groups, and building a business that is both fulfilling and financially rewarding. "I feel like Cinderella," she says. "STEMTech has given me the gifts of health and wealth."

Whenever she leaves the house, she always carries STEMTech brochures, DVD's and newsletters with her. "I make sure to keep my eyes and ears open to notice who I might run into that needs StemEnhance." Sometimes this means going out of her comfort zone and approaching strangers; but Sharon believes that her strength of purpose can overcome her initial discomfort in these situations. She explains, "It is so important that people learn about their own stem cells and their power for renewal in the body."

For a long time, Sharon has been researching natural health and coaching others to develop a healthier lifestyle. StemEnhance is in many ways a perfect culmination of her research. She says, "Now I want to tell the world about StemEnhance."

WHAT IS SQOLA?

A A fur-bearing member of the duck family, found exclusively in Australia.

B A cerebral condition that leads to early genius.

C The language of a long-lost tribe in New Guinea.

Answer: None of the above.

SQOLA is the acronym for the STEMTech Quality of Life Assessment, an exciting scientific program that allows new STEMTech distributors on AutoShip to track and document their health improvements with StemEnhance. The procedure is FREE and simple: New distributors complete a questionnaire found on STEMTech's website BEFORE taking their first StemEnhance... to establish a baseline of current health. Then identical questionnaires are completed four and twelve weeks later to note changes and improvements. These questionnaires are based on the scientifically validated SF-36 questionnaire that has been in use for over 15 years.

Individual participants in SQOLA will be able to monitor their own health and compare their data to data collected from thousands of other participants in SQOLA and SF-36. *Please note: The identity of each participant is kept confidential, so your privacy is protected.*

The published quantitative results of the SQOLA program will show people in *black and white* the specific benefits people enjoy with StemEnhance. This will become a valuable tool for building your business!

Existing distributors: Go to the website stemtechhealth.com and click on the SQOLA link to learn about SQOLA.

New distributors: You will receive an email with instructions how to get started on SQOLA.

COUNTDOWN TO COSTA MESA

As we leave 2006 behind and welcome the year 2007, we know what's coming....

Time is running out for the "Countdown to Costa Mesa" Contest. Check the Fall HealthSpan and www.stemtechhealth.com to learn how you can qualify for...

FREE EVENT CASH VOUCHERS!

TWO FREE ROOM NIGHTS!

FREE AIRFARE!

THE FIRST ANNUAL STEMTECH CONVENTION!

This spectacular three-day event is sure to launch your STEMTech business to a higher level than ever before. From the moment you arrive at the beautiful Costa Mesa Hilton, you are in for the experience of a lifetime!

At the Costa Mesa Hilton, you are in for a jam-packed weekend that can launch your business to heights you may only have imagined. Your \$159 Event Registration is your ticket to all Convention activities, including

TWO GENERAL SESSIONS

Lots of exciting announcements!

TOP-NOTCH WORKSHOPS*

Learn from Ray, Christian, Errol & STEMTech's top Field Leaders!

TOURS OF STEMTECH HEADQUARTERS & VITATECH

Follow the trail of StemEnhance™!

GREAT MEALS & THE RECOGNITION BANQUET

Will we see YOU honored on stage for your accomplishments?

* To accommodate STEMTech's multilingual distributor base, workshops will be offered in four languages:

English
Spanish
Mandarin Chinese
Korean

Learn about STEMTech and StemEnhance in the comfort of your native language!

Now, while we don't want to give everything away about plans for your weekend in Costa Mesa, here are a few of the **Workshops** planned:

Enhanced Comp Plan Features
New Product Introduction
New Internet Recruiting System
The STEMTech Online Community
Conducting Successful Seminars & Meetings
Road Map to Success
New Back Office Features

These and many other training opportunities will give you the added tools to explode your business in 2007! Your only challenge will be to **DECIDE** which Workshops to attend in the time available. When you see the **full Workshop Schedule** at online registration or the event registration table, you can start planning your strategy to maximize your training opportunity.

All weekend you will enjoy the legendary royal treatment of the Costa Mesa Hilton and its dedicated staff, as you meet new STEMTech friends and share special times with the management team and Field Leaders. With an agenda that goes from early morning into the evening, it may seem hard to pick one highlight of the First Annual STEMTech Convention. But there is no doubt that the Saturday evening Banquet will be a very memorable time for everyone.

Imagine this... You enjoy a wonderful gourmet feast with old and new friends, then the lights go down and the stage lights up, and it's time for...

HONORS, PROMOTIONS & RECOGNITION!

It just doesn't get much better than this. Make your plans **TODAY** to share the excitement of the **FIRST ANNUAL STEMTECH CONVENTION!**

There's LOTS to do in the Costa Mesa area!

More About

Groundbreaking Science

By Christian Drapeau

You have heard the statement many times: The release of stem cells from the bone marrow and their migration to the body's tissues is a natural process. Nowadays, those of us associated with the marketing of StemEnhance™ consider this statement to be a universal truth; but not so long ago the idea of the natural release and migration of stem cells was just that... an idea. Although there was some compelling data

supporting this idea in the scientific literature, and although my colleagues and I strongly believed that the idea was in fact a truth, at that time we could not find many scientists who agreed with us. Fortunately, research developments in the last three years have proven us right and have set the stage for a historical change in the way people view health and wellness.

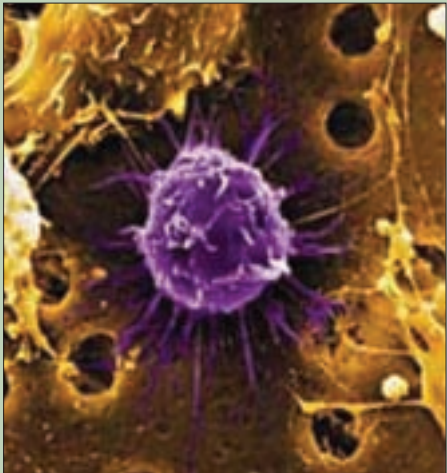

As early as 2001, scientists published a

Can
one single
stem cell
reconstitute
the entire
blood
system?

series of scientific articles that suggested strongly that the release and migration phenomenon was natural. One of the early studies reported was performed by Dr. Diane Krauss and her research team. Dr. Krauss wanted to answer this question: "Can one single stem cell reconstitute the entire blood system?"

Devising a research protocol to find the

answer was not as simple as one may think, for it is very difficult to identify a stem cell under a microscope. If you are to simply inject one, how can you tell that the one you are looking at is a stem cell? The process to test the identity of the cell would damage the cell and make it no longer usable. They resorted to an ingenious process. It is well known that when injected in the bloodstream, stem cells home to the bone marrow, and only stem cells do. Therefore, if one injects a population of bone marrow cells in the blood, the only cells to reach the bone marrow after a few hours are stem cells. Krause irradiated female mice and injected male bone marrow cells. After a day or so, the group collected cells from the bone marrow -only stem cells- of the

A Human Stem Cell

recipient mice, and a single one of these cells was injected in another irradiated female. After this step in the experiment, the researchers had female mice containing one single male stem cell in their bodies. Could a single stem cell keep alive mice whose blood cells had been damaged by radiation? The scientists were soon to discover: After a few weeks, the entire blood system of the test mice was back, demonstrating that only one stem cell was sufficient to reconstitute the blood system!

The study of Krause involved injecting one male stem cell in irradiated female mice. Because male DNA is XY whereas female DNA is XX, it is possible to identify in the body the cells that came from that one original male stem cell. When Krause looked at the animals almost a year later, cells containing the Y chromosome were found in various tissues including the intestine, liver, lung and skin. This cross-gender protocol (male stem cell in a female mouse) revealed that stem cells from the bone marrow could naturally migrate to reach tissues and become cells of these tissues.

But the stem cells in the Krause research were not the animal's own stem cells, they were injected. Would we see the same migration and adaptation phenomenon if we tapped into the natural release of an animal's own stem cells? Concurrent with the Krause studies in 2001, Dr. Donald Orlic and his research team at the National Institute of Health answered that question. For their research they stimulated stem cell release in

animals who had suffered heart attacks. In a groundbreaking experiment, Dr. Orlic showed that dramatically increasing the number of circulating stem cells for just a few days actually eliminated scar tissue in the heart and almost completely restored normal heart function... in as little as 27 days! Simply stimulating the release of stem cells from the bone marrow was sufficient for stem cells to migrate naturally to the heart and become heart cells.

With these two powerful studies published five years ago, one would wonder why it took so long for the scientific community to agree that stem cell release and migration is a natural process, and that stem cells constitute the natural renewal system of the body. The truth is that in spite of these studies, there were still many unanswered questions. Research in the past five years has added an impressive amount of information about stem cells to the scientific community and to the world at large. A very impressive number of articles published in prestigious scientific journals now confirm the fact that stem cell release and migration is, indeed, a natural process.... both in animals and in humans.

Only five years ago it was

almost impossible to find scientists who would take our "idea" about stem cells seriously. Now, happily, we find more and more respected members of the world's scientific community who support our view. What's more, these researchers now see in this discovery a new way of thinking about health and

wellness. If science has discovered that stem cell release and migration is the natural renewal system of the body, is there a better approach to maintain health than simply supporting this natural process? I don't think so. What can you do to reach optimal health? Maintain a good diet, eating as natural and raw as possible, adhere to a healthy lifestyle that reduces stress, cultivate love and laughter... and take your StemEnhance!

One
would
wonder
why it took
so long
for the
scientific
community
to agree
that stem
cell
release
and
migration
is a natural
process.

FIRST!

John Choi
California

"Koreans are already educated about stem cells," John Choi says, "so they are very ready to try StemEnhance™." John goes on to say that the Korean community has long known about the effects of embryonic stem cells in the body, but have come to realize that "adult stem cells are even better" when it comes to renewing the body as it ages. "These cells have such a wide-open application," he explains. Building upon his community's knowledge and interest in stem cells, John has been able to build a growing business in California and elsewhere, working closely with his mentor, Howard Kahng.

A retired Christian minister, John now works in the field of chiropractic medicine, and "I see illness, discomfort and weakness daily." Many of the people he sees in his clinic are experiencing a severely diminished quality of life. He has found that many of these people are very eager to try a product that will help to increase both the quantity and the quality of their body's stem cells. About 250 people a week come to his clinic, and "I hand a StemEnhance brochure to each one of them as they leave." A good percentage of these clients are on the phone to John within hours or a day or two, requesting their first bottle of StemEnhance.

John himself is a great advertisement for the benefits of StemEnhance. At 70, he takes four StemEnhance a day even though he suffers from none of the age-related problems that many face. "I take StemEnhance for the general maintenance of my body and mentality. I want to keep the vitality that I now have for a long time."

Brian Ings
California

A retired Los Angeles firefighter and later a general contractor, Brian says he "loves networking. This industry has been very good to Margie and me." Brian has known Christian Drapeau for many years, and says Christian's "integrity, energy and commitment to science" are what brought him to STEMTech. "Christian's reputation is above reproach. He's very credible, and always is on the cutting edge of research." Joining a company where Christian is the CSO is, Brian says, "a no-brainer. I didn't hesitate a minute."

Brian had been taking AFA for more than ten years to help deal with residual joint discomfort after injuries and many surgeries that left him unable to pursue his love of running. "You just learn to live with it," Brian says. After only six-eight months on StemEnhance, however, Brian was stunned: "The joint discomfort was gone. Now I'm back to running, and I can pursue the athletic lifestyle I've missed."

Another "walking advertisement for StemEnhance," Brian says he knows that he and Margie can achieve a high level of financial success with STEMTech. "You just meet people where they are and show how you can help to meet their needs." Brian always leads with the product. "When people have good results, they are eager to come on board and share the excitement."

Maxine Jensen
North Dakota

Is it possible for two people to make a good living with STEMTech if they both live in a tiny town in North Dakota? The answer is YES. Maxine learned about STEMTech a year ago from Everett Potter, who is a neighbor. "Everett was so excited," Maxine remembers. "We both knew that something that works with the blood was going to be fantastic." Maxine went FastStart then and there, and "I started talking to people right away, even though I didn't know much about how StemEnhance worked." Her excitement and enthusiasm were contagious, however, and her business grew.

Maxine had suffered from some ailments that left her with back discomfort and physical fatigue, to the point that she had been unable for two years to do ordinary housework and gardening - two things she enjoyed. She had also lived with constant discomfort in her spine since childhood. For some time she had used a variety of natural remedies to improve her condition, but "nothing really worked much." Within a few months of beginning StemEnhance, Maxine says she is "a new woman. I'm living a normal life again." Her discomforts are gone, and she has plenty of energy for her home and garden work.

These days Maxine works with Everett to build their businesses. "We both like people," she says, "and we care about them. There's nothing more rewarding than helping someone feel better." Maxine is "very impressed with the company," and enjoys going into her Back Office to check on her organization. She says, "I appreciate not only being able to have StemEnhance, but also all of the wonderful people that make STEMTech such a great company."

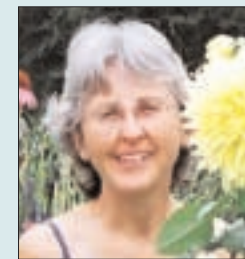

E. J. Morris
EJ Morris Marketing
Pennsylvania

A self-confessed skeptic, E.J. says he took StemEnhance™ for awhile before he began sharing it with others. He had been involved with other companies that marketed nutritionals in the past, so he needed to discover for himself that StemEnhance was really different. "I soon realized that there is nothing to compare with this product. We have the only thing like this on the planet earth!" he says now, all skepticism vanished.

E.J. has worked as a master photographer for more than thirty years, and takes lots of senior portraits for yearbooks. "I need energy and stamina for that job, and I need to make it fun for the teenagers. Thanks to StemEnhance, I hold up well doing hundreds of photo-shoots."

E.J.'s main passion these days, however, is sharing StemEnhance and the STEMTech opportunity with everybody he meets. "I see people everyday, and I tell them about optimal health and how to achieve it." He uses an automated 800 number, e-books, the website, the product brochure, the newsletters and DVD's "all the time," and finds Christian Drapeau's weekly product call "a novel concept and great marketing tool."

While E.J. admits that he really wants to achieve Triple Diamond in 2007, he says that his constant goal is "to help a lot of people change their lives and lifestyle." He adds that StemEnhance and a healthy lifestyle in combination are "the best life insurance policy you can have." There is no need to "sell" StemEnhance, E.J. says. "You tell people about a great new restaurant or movie so they can enjoy them, don't you? In the same way you tell everyone about StemEnhance so they can enjoy life. It's that simple."

Maryanne Robertson
Ontario, Canada

MaryAnne came to STEMTech with absolutely no experience in network marketing. She had an interest in herbalism, though, and had been involved with AFA over the years; so when she heard about StemEnhance from a relative, she was intrigued. "But I didn't start out very well," she says now, "and when my first commission check was for only \$48, I was paralyzed with fright. I thought I wouldn't be able to live up to the expectations of the people making big checks in this business."

Then she decided to heed the advice of her upline - Izzy Matos and Tamera Campbell - who told her to participate in weekly training calls and to be ready to share StemEnhance and STEMTech with everyone. "So I put brochures and newsletters in envelopes and had them with me at all times, ready to hand out." MaryAnne also used her background with herbs and AFA to write several articles for health magazines. These articles, pre-approved by STEMTech, allowed MaryAnne to get out the word about StemEnhance as she educated people about the benefits of good nutrition and herbal supplements. "I learned as I taught," she says, "and I am a long way past those first frightening weeks. I'm building a business!"

MaryAnne and her husband Greg are "Canada's oldest teddy bear makers," artists who have been creating high-end collectible bears since 1970. In 2001 they won the coveted prize "Teddy Bear of the Year" in the United States, and they are still filling orders that came as a result of that win. When she's not designing or constructing a collectible teddy, MaryAnne is working her STEMTech business. "I'm after Izzy's Triple Diamond pin," she says.

Patricia Silay
Choices for Self Discovery
Arizona

Trish Silay is another one of those wise people who have been sustaining their health with AFA for years... 18 years in her case. She had known Christian Drapeau for years, too, so it was a natural extension of her long career as a health and wellness facilitator for her to become a STEMTech distributor once StemEnhance became available.

"I have always tried to help people get to a higher state of wellness," she says. Trish listens to what people tell her, and facilitates their health improvement. Because her friends and acquaintances know that she has an understanding of nutrition and natural supplements, "they trust what I tell them and what I'm offering them," Trish says. "I always stress that the FastStart option is the way to go," she adds, "because it brings the best benefits."

Trish does her STEMTech business without a computer. These days, that is very unusual! Nevertheless, her business is growing, and she is helping more and more people to find a better quality of life with StemEnhance. "I'm more like the tortoise than the hare," Trish says. "I expect it to take a year for me to make Double Diamond." She explains that she is working "slowly and steadily" to build a residual income for a comfortable retirement with her husband Joe Yellowhawk, who is a stained glass artist and musician. "We follow the path of Joe's native American tradition," Trish says, "so we would like to have a self-sustainable home, one that has solar panels and is environmentally friendly. I look to StemEnhance and STEMTech to help us realize this dream for our future."

PERSONAL STORIES

How StemEnhance improves quality of life

Sal & Val: A StemEnhance Love Story

Triple Diamond Izzy Matos says that when he first met Sal Vaccaro, "he was at the hospital hooked up to an intravenous drip." Sal remembers it well: "It was definitely a drag." Over the next few months, Sal got better, but things still were far from perfect and he could not fully enjoy life.

Then Sal was introduced to StemEnhance™. "In three days, everything got better!" Sal says. "I couldn't believe it." Sal knew that he had found a great product that might also help him and his wife Val improve other aspects of their health.

In just weeks, gone was the problem with an achy knee that Val was always stretching and rubbing, and which made an ordeal out of climbing stairs. "Now when we go into Manhattan, I can actually run up and down the subway stairs," Val says. No longer did Sal have to worry that his back would "go out" when he bent over to pick up something on a plumbing job. "I used to be out of commission for a couple of weeks when that happened." Sal and Val were feeling great.

The Vaccaros were so enthralled with StemEnhance that they decided to build a STEMTech business. "We love to hear people say, 'Hey, this doesn't hurt anymore!'" Sal and Val christened their 2000 Monte Carlo "The Stem Mobile," and took it all over Long Island to hold home meetings. "The business has been very good to us," the Vaccaros say. Proof? They just purchased a new Stem Mobile: a 2007 Cadillac!

"Geezer Jock" on StemEnhance

What special plans do you have for your next big birthday? For her 50th, home health nurse Kathy Jager decided to take up competitive track and field. While she had been athletic all her life, Kathy had never been in competition. At fifty, she figured it was about time to start.

In the thirteen years since, Kathy has participated in national and international track meets for people over thirty, and has set world records in three running events. Currently, she holds the **World Record** for the 60 meter sprint (8.91 seconds) in her age division. "Each year I add another event to my 'repertoire,'" Kathy says. At 63, she now competes nationally and internationally in nine individual track and field events (including the pole vault). She also competes in softball

and soccer, she swims and plays golf, and she coaches high school pole vaulters. "I tell them 'You have to be able to jump higher than I do. I'm a grandmother!'" That motivates those young guys."

Kathy says that StemEnhance has done wonders for her demanding athletic lifestyle. "Right away I noticed three things: My range of motion increased significantly, my endurance is much greater, and my recovery time after training is greatly reduced." Kathy now says she can train longer without fatigue, and those pesky twinges in her hip and

back have disappeared. She wants to share the news about StemEnhance with her training buddies, both young and "seasoned." She says, "I'm really excited about StemEnhance. I want everybody to know that you don't have to be living an unhealthy lifestyle to benefit from StemEnhance. Whatever you're doing, StemEnhance can help you to a higher level of performance!"

A Heart-Warming Story from Orlando

Since her birth 25 years ago, Zahira "Jyni" Ubinas has been challenged with problems that involved her physical and mental development, affecting her energy levels and her health in general. She would often tearfully complain of the trials that

she had to endure. She was virtually dependent 24 hours a day on her mother Palmira to be her caregiver. Life itself was a constant challenge for both Zahira and Palmira, especially in the last five years as Zahira's condition worsened.

Then STEMTech came to town in August, and Palmira purchased a bottle of StemEnhance for Zahira. After just a few days, Zahira's physical

condition improved dramatically and - best of all for both Zahira and her Mom - Zahira soon was sleeping through the night. "She has never been able to do that, and I always had to be there to help her when it got really bad," Palmira explains. These days Zahira sleeps in her own bedroom... for the first time in her life!

PERSONAL STORIES

How StemEnhance improves quality of life

When Christian was back in Orlando a few months after that first visit, Zahira came to offer him a gift, and he could see the difference in her. Christian relates, "The first time I saw Zahira she would not look at me and she was not interacting with anyone. This time, she was talking, engaging in our discussion, and was walking around on her own, taking in her surroundings with great curiosity. What a change in this young girl's life!"

Palmira notes that her daughter is "so much more alert, and she has energy now that the physical misery is no longer plaguing her." These days Palmira can take time to enjoy life a lot more, since all the work around the house is not upon her shoulders. "Zahira can help me now," Palmira says, happily, "and she can take care of herself." For the first time, Palmira is looking at the possibility of working outside the home. While she considers her new options, she wants to include time for sharing StemEnhance™ with friends and acquaintances. She says, "I just have to tell people everywhere about StemEnhance!"

Making a Difference

Dr. Bea Ehram conducts a holistic veterinary practice for small animals in New Paltz, NY. She uses acupuncture and Chinese medicine in her practice and recommends minimal vaccines and a diet of raw foods for her animal patients. For years she has seen the benefits of natural supplements for the animals she treats.

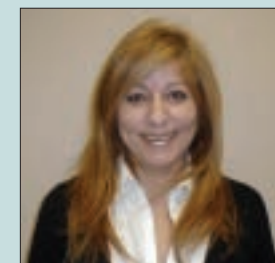

"Dr. Bea" maintains a natural diet herself, too, and deals the best she can with her fatigue using "many supplements." A friend told her about StemEnhance late in 2005, and Bea agreed to try it. "I try everything when it comes to supplements," she confesses. "You never know when something is going to really help." Truth is, she didn't expect anything dramatic to happen from adding StemEnhance to her daily supplements. But she was wrong... "In two or three days, both my husband and I noticed that my mood had lifted. I have a tendency to be depressed, and that low feeling was gone." Things kept improving for Bea: "After the first week, I could double the resistance on the elliptical machine and raise the weights in the gym by 5% - the first time in over a year - and I wasn't wiped out after a workout. My recovery time was shortened dramatically. It was a great feeling!"

Soon Bea noticed that the fatigue and other discomforts were present less and less, and her general condition was improving everyday. "My discomfort really affected my sleep," Bea says, "so I now take an evening dose and another one if I wake up in the middle of the night. That seems to be all I need to get a good night's sleep."

For both humans and animals taking StemEnhance, Dr. Bea advises sufficient hydration. "Too little water in the system seems to diminish the positive effects of the product. Avoid a 'Yin deficiency,'" she says. "Drink plenty of water!"

The Creation of "A New Woman"

For a long time, it took a real team effort for Diana Garvie to get up and ready for work at the wholesale grocery company she and her husband own near Toronto. Her mobility was limited to the degree that "I couldn't shower, brush my teeth or dress on my own. My husband had to help me do everything," Diana says. She could wear only flip-flops because her feet were always so swollen.

Then her uncle happened to sit next to Norma Gieves on a plane, and he brought home information on StemEnhance. Diana's dad said, "You've got nothing to lose.

Try it." So she did. She began taking four capsules a day, and was shocked when only two weeks later the swelling in her feet was gone. "I could wear shoes for the first time in ages!" she says. Within five months, every bit of the discomfort that had bothered her for so long was just a distant memory. Diana felt like a new woman.

Then the stresses of life intervened and Diana went without StemEnhance for five weeks. "I went backwards," she says sadly. "All those problems were right back." In addition, Diana discovered (the hard way) that her body has a super-sensitivity to chlorine pool additives. "After swimming in a pool on vacation, I was back like I was before. It was horrible!" Fortunately, Diana thought to get back on StemEnhance, and in just a couple of weeks that "new woman" had returned to stay. She says, "You won't find me missing taking my StemEnhance ever again!"
