

**SE3™ 60 capsules per bottle**  
**Stemflo® 90 capsules per bottle**

Activity and exercise naturally damage the muscle fibers (cells). Recent scientific developments have revealed that adult stem cells released from the bone marrow are at the core of the body's renewal process, traveling throughout the body to support organs and tissues in need.

Having more adult stem cells in the bloodstream allows you to repair, rebuild, and recover faster\* – so you can return to activity and athletic participation more fully and more quickly.

StemSport™ is the concept of using the Stemtech products to support an active lifestyle. Whatever product(s) is available in your country can be consumed pre and post activity/training/exercise/competition to assist in renewal.

From a person just starting activity to the elite athlete, StemSport™ plays a role in assisting the recovery process and enhancing the natural renewal process.

Using the Stemtech products the StemSport™ way Consume SE3® and Stemflo® daily for over-all renewal.

When exercising, training, and competing there are key times to take the products to enhance recovery and renewal.

### Nutritional Benefits

- Focus
- Performance
- Renewal
