FAQ'S

What does StemPets FLA do?

StemPets FLA supports the natural release of adult stem cells from your large animal's bone marrow. Adult stem cells are the "master" cell found in the body after birth, most abundantly in the bone marrow. They form the very core of the body's natural renewal system for animals, just as they do for humans. Without them, the natural renewal process of your animal's tissues and organs simply could not take place.

Why do your large animals need StemPets FLA ?

For a number of reasons such as heavy exercise and growing older, your animal's tissues and organs require ongoing natural renewal. By supporting the natural release of adult stem cells from the bone marrow, StemPets FLA helps provide the raw materials necessary for this renewal process to take place. The result: a uniquely effective health and performance strategy for your large animals.

FOR YOUR INFORMATION

No sugar, artificial colors, artificial flavors, dairy, yeast, or preservatives.
