

## derma stem lift

### **What is DermaStem Lift?**

DermaStem Lift is an anti-wrinkle product that works quickly and effectively, revives skin for a more youthful look, diminishes visible signs of aging, and provides long term benefits.

### **Does DermaStem Lift replace DermaStem serum?**

No. DermaStem Lift works more as an immediate cosmetic aid for your skin, whereas DermaStem Serum is a more continuous, daily skin care treatment. For the ultimate results, you should use both DermaStem Serum and Lift daily as needed.

### **What is the shelf life for DermaStem Lift?**

Lift has a shelf life of two years.

### **Does DermaStem Lift need to be refrigerated?**

No, it doesn't. Unlike DermaStem Serum, you can keep Lift at regular room temperature.

### **What is plankton extract and how does it benefit the skin?**

Plankton extract is a concentration of marine organisms such as diatoms, green micro-algae, greenish-blue and nitrogen-fixing seaweed. Plankton extract can fill the furrows of the skin very quickly and the small wrinkles are smoothed out. Its results are visible in 15 minutes and lasts up to 6 hours.

### **How does DermaStem Lift work at the cellular level?**

DermaStem Lift has a moisturizer effect in the lipidic layers of the skin and mimics the lipid structure in the stratum corneum (the outer layer of the skin), acting as a "second" skin" and restoring the cutaneous barrier. Some of its properties provide a reservoir of water and biologically active molecules which are slowly released to the stratum corneum.

### **Is DermaStem Lift good for sensitive skin?**

DermaStem Lift was designed only with natural and organic ingredients, which makes this product safe for sensitive skin. Lift contains extract of Epilobium Angustifolium, a flower also known as fireweed or rosebay willowherb, which reduces redness and alleviates irritated or inflamed skin.

### **Has DermaStem Lift been tested on animals?**

No, DermaStem Lift has not been tested on animals.
